

HACKATHON SEASON – 3

MISSION 6 – Automate with make.com

TASK: To implement a booking automation for one of your meetings, automate research using AI, and send an alert on Discord

Make.com – Automation Tool

Why Automation + Tool Overview:

- **Save Time:** Manual booking follow-up → Instant intelligent processing.
- **Never Miss Details:** Automated research and preparation.

Project #1: Cal.com Booking Processor Tools, Variables, Date Formatting

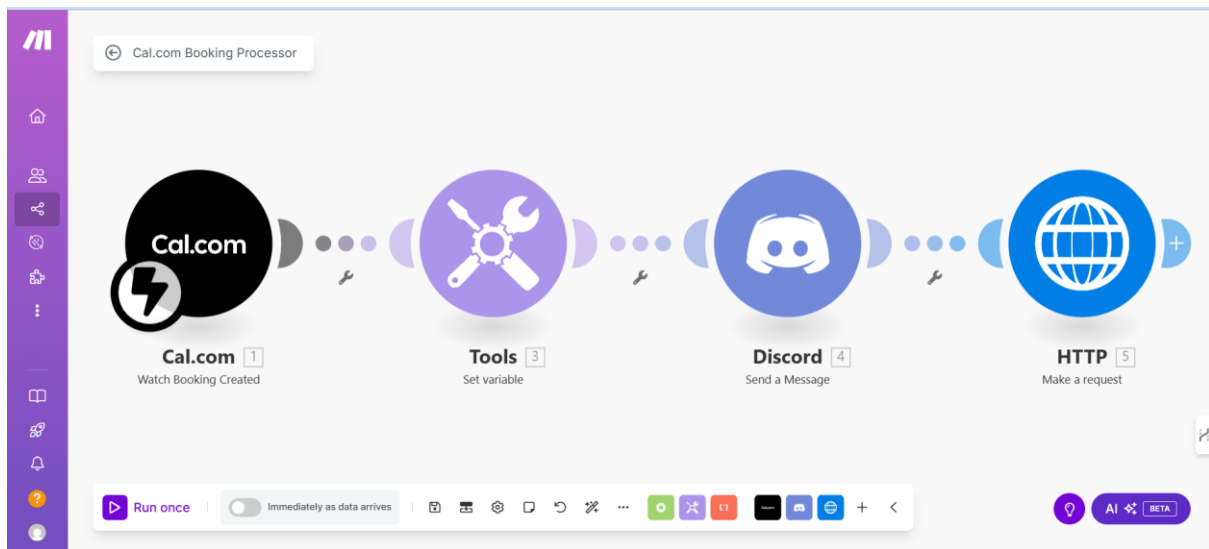

Project #1 Flow - Data Processing

- I. Cal.com new booking trigger
- II. Tools Module to set variables
- III. Format date for readability
- IV. Discord notification with formatted booking details
- V. Team gets: Clean, professional booking alert

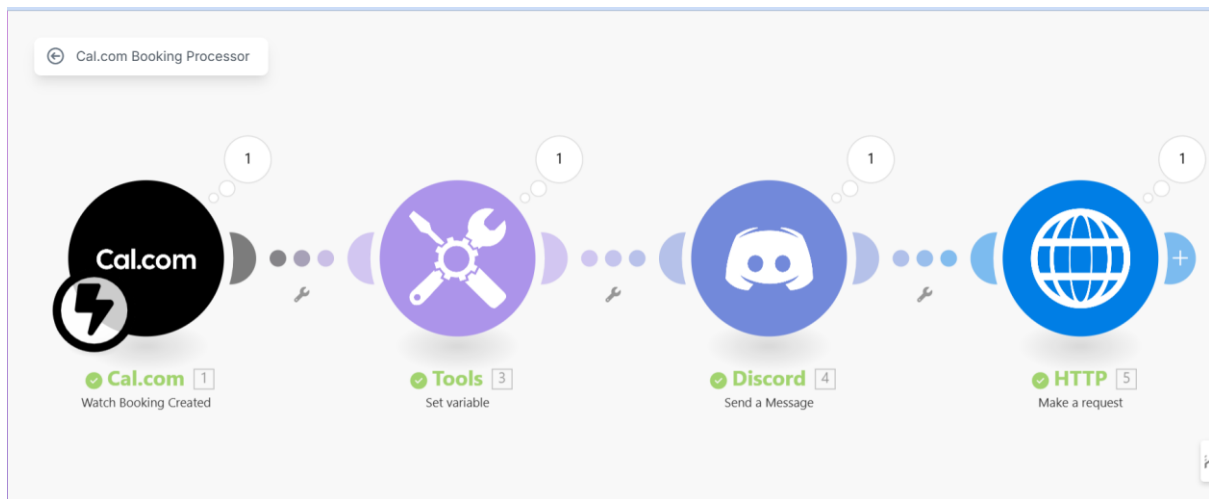

Project #1 Scenario:

- **Cal.com** – Watch Booking Created
This module tracks the bookings once created by the client and fetches the details filled by them.
- **Tools** – Set Variable
This module converts the fetched date and time which is in unknown format to the format which is easy for readability.
- **Discord** – Send a Message
This module will send a message to the team in discord. The message contains all the details filled by the client. The message is delivered in the name of “Integromat”.
- **HTTP** – Make a request
This module makes a request to POST the data / the details to the discord channel in the customized name.

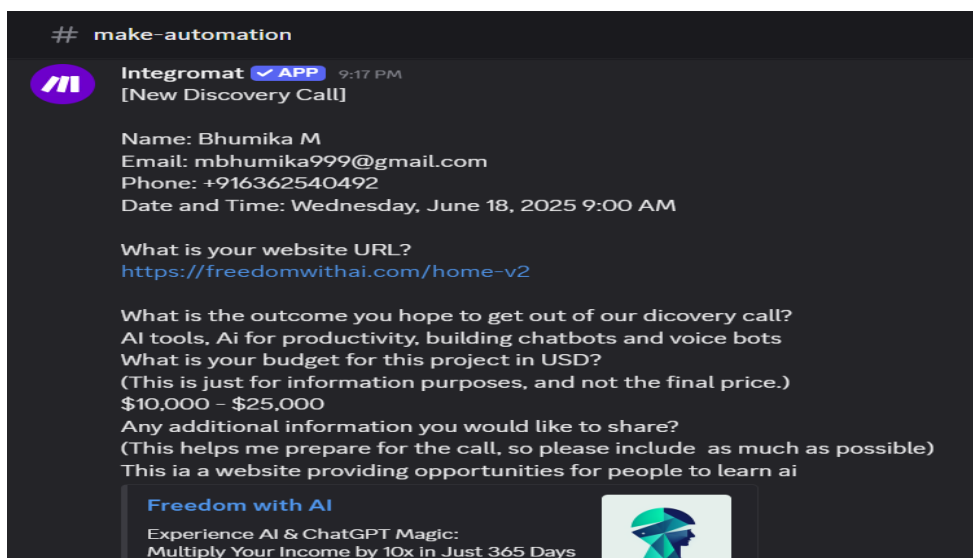

The below figure is the scenario built in make.com and shows all the modules used and their actions.

Scenario runs successfully:

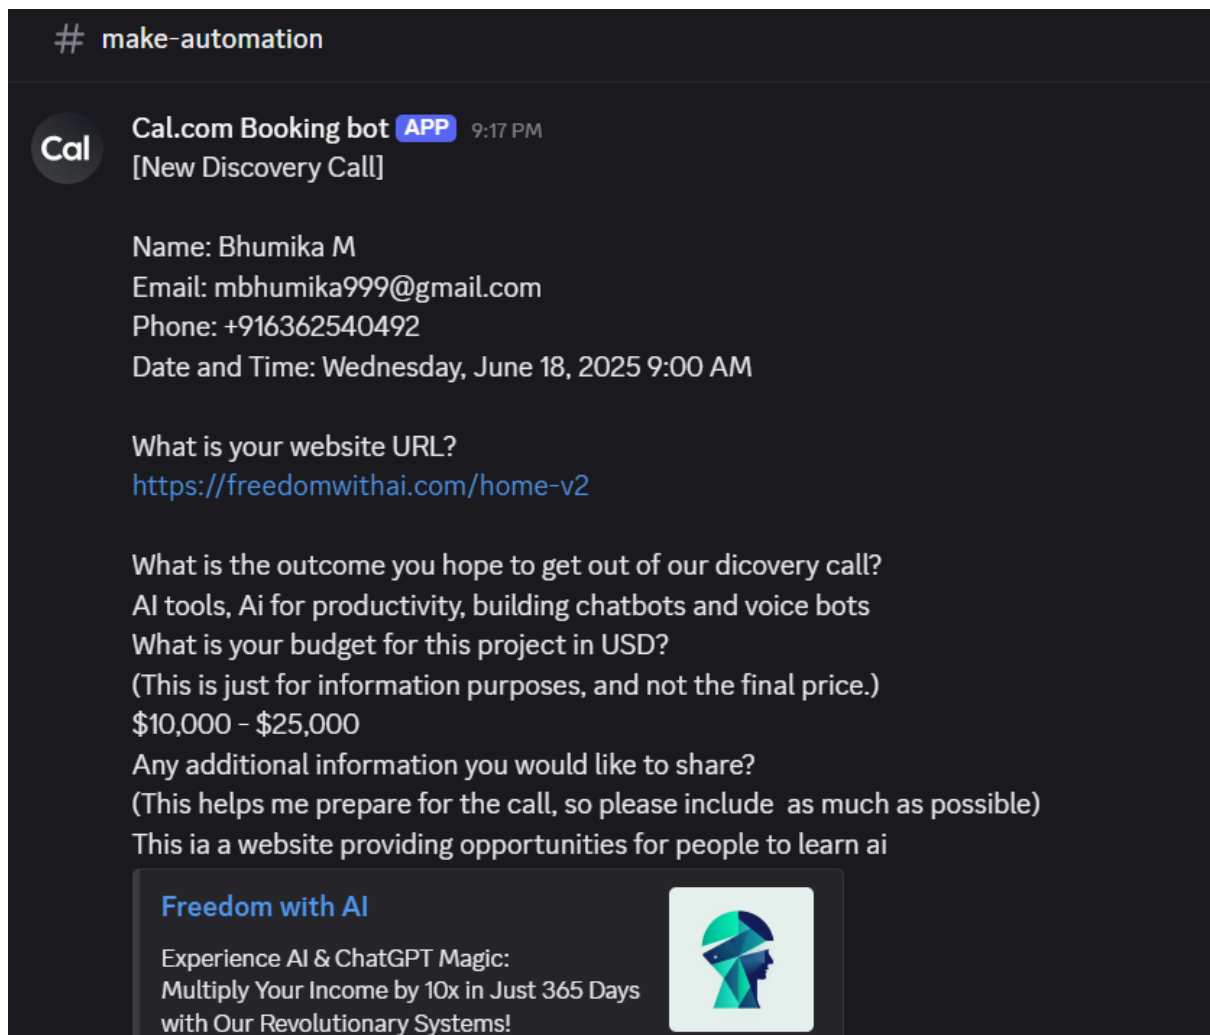

The picture below is the message I got in discord channel named “make-automation” in the name of “Integromat”.

Result:

The picture below is the message I got from discord channel from customized name "Cal.com Booking bot".

PROJECT #2 - AI Lead Intelligence System

AI integration, web research, advanced routing

The Goal: Prepare your team with intelligent lead insights

Project #2 Flow - Intelligent Processing

- I. Cal.com booking with questionnaire answers
- II. OpenAI Summarizes responses + creates prep sheet
- III. Perplexity Research company using URL
- IV. Router Sends to appropriate closer based on budget
- V. Team receives Complete lead intelligence package

Project #2 Scenario:

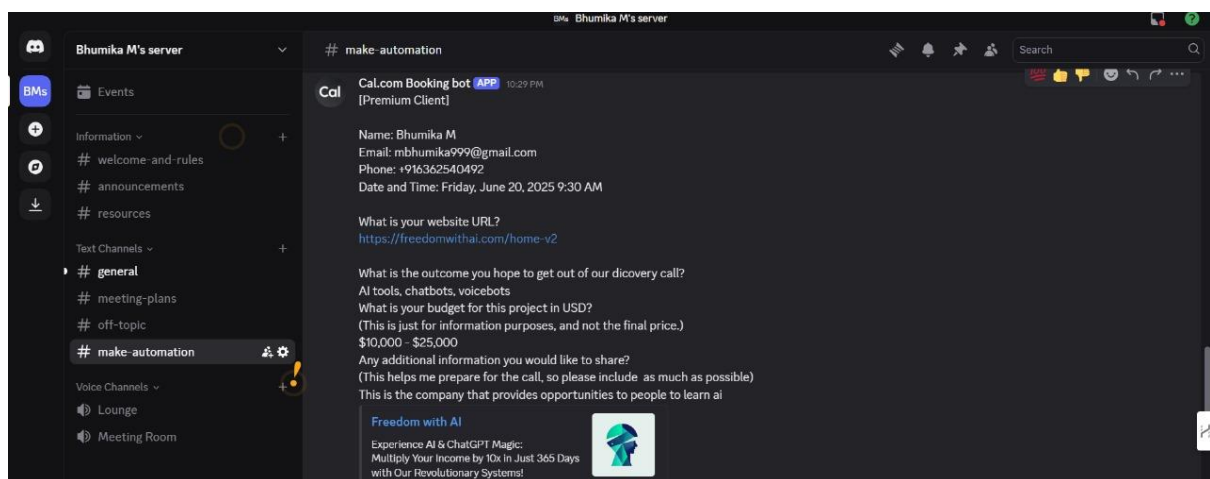

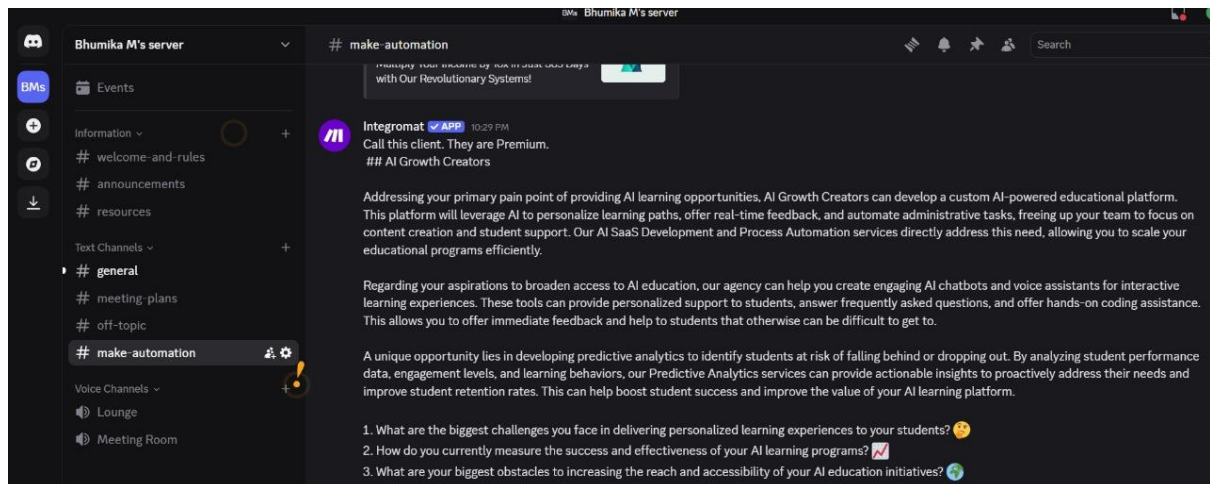

- **Cal.com** – Watch Booking Created
This module tracks the bookings once created by the client and fetches the details fill by them.
- **Tools** – Set Variable
This module converts the fetched date and time which is in unknown format to the format which is easy for readability.
- **Router** – Router is used to transfer the message to different modules at the same time or based on the filter
- **Filter** is applied based on the client’s budget.
\$1k-5k Budget Level Assigned To: Junior closer Preparation, Level: Basic prep
\$10k-25k Budget Level Assigned To: Senior closer Preparation, Level: AI summary
\$0 – “Client is disqualified” message sent to the team.
- **Discord** – Send a Message
This module will send a message to the team in discord. The message contains all the details filled by the client. The message is delivery in the name of “Integromat”.
- **HTTP** – Make a request
This module makes a request to POST the data / the details to the discord channel in the customized name.
- **Google Gemini AI** – Create a Completion
This module takes input as the form filled by clients and research about the client and their business information based on their website URL provided and creates a complete message / summary for “Premium client” whose budget is high and sends the summary to the discord channel.

Result:

Got the message to Discord channel.

The message says they are “Premium client” and gives summary about their business and other required information.

Conclusion: I learnt basic intermediate automation skills and built a **Meeting Booking processor with Lead Intelligence system.**
